Professional Summary

Software Engineer with **1.8+ years of experience** building scalable backend applications using **Java, Spring Boot, Python, FastAPI, and PostgreSQL**. Experienced in developing **RESTful APIs, microservices, and event-driven applications** using **Apache Kafka**, with strong expertise in **RDBMS, SQL, database design, query optimization, and performance tuning**. Skilled in **Spring MVC, Spring Data JPA, Hibernate, API integration, asynchronous processing, and backend architecture**. Hands-on experience with **Docker, Kubernetes, Git, AWS, CI/CD, and Agile** development practices. Strong foundation in **object-oriented programming, data structures, debugging, testing, and software design principles**, with a focus on building reliable, maintainable, and high-performance software solutions.

Technical Skills

Programming Languages	: Java, Python, JavaScript, SQL
Backend Technologies	: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, FastAPI, Flask, RESTful APIs, Microservices, Apache Kafka, API Integration
Frontend Technologies	: ReactJS, HTML5, CSS3, TypeScript
Databases	: PostgreSQL, RDBMS, Relational Database Design, SQL Query Optimization.
DevOps & Tools	: Git, GitHub, Docker, Kubernetes, AWS, Maven, Swagger/OpenAPI, Postman
Data Science & ML	: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
Software Engineering	: Object-Oriented Programming (OOP), Data Structures, Design Patterns, API Testing, Integration Testing, JUnit, Mockito, SDLC, Agile Methodology

Education

University B.D.T. College of Engineering	Davangere, Karnataka
<i>Bachelor of Engineering in Computer Science and Engineering</i>	<i>Aug. 2020 – May 2024</i>

Experience

Software Engineer	Dec 2024 – Present
<i>AIML SolutionsNow LLP</i>	<i>Bangalore, Karnataka</i>

- Developed **RESTful APIs** using **FastAPI** and **PostgreSQL** for laboratory workflow automation, implementing scalable backend services and reliable data processing.
- Built full-stack applications using **FastAPI, Flask, React, PostgreSQL, and Docker**, following modular design, clean coding practices, and maintainable application architecture.
- Developed backend services using **Java and Spring Boot**, implementing REST APIs, business logic, exception handling, validation, and service-layer components for enterprise applications.
- Implemented **Apache Kafka** for real-time, event-driven application workflows, including message producers, consumers, asynchronous processing, and service-to-service communication.
- Designed and optimized **RDBMS** solutions using **PostgreSQL, MySQL, and MS SQL Server**, including relational schema design, normalization, indexing, joins, constraints, and complex SQL queries.
- Performed **SQL query optimization and database performance tuning** to improve data retrieval efficiency and support reliable backend application performance.
- Documented APIs using **Swagger/OpenAPI** and collaborated on frontend integration, API contracts, request/response validation, and end-to-end application workflows.
- Developed ML models using **Random Forest and ARIMA** for demand forecasting, applying data preprocessing, feature engineering, model evaluation, and prediction workflows.
- Applied **Docker and Kubernetes** for application and ML deployment, supporting containerized workloads, environment consistency, scalability, and deployment automation.
- Applied **Agile development, Git, CI/CD, debugging, logging, performance optimization, and code quality practices** while collaborating with cross-functional teams to deliver reliable software solutions.

Projects

Banking Application | *Java, Spring Boot, Spring MVC, Apache Kafka, Hibernate, MySQL, REST API*

- Developed a secure banking application using **Java and Spring Boot**, implementing customer management, account creation, deposits, withdrawals, fund transfers, and transaction tracking with scalable backend services.
- Designed and developed **RESTful APIs** using **Spring MVC and Spring Boot**, implementing request validation, exception handling, authentication, standardized API responses, and robust error handling.
- Integrated **MySQL RDBMS** using **Spring Data JPA and Hibernate**, designing relational entities, implementing CRUD operations, and optimizing SQL queries for efficient customer, account, and transaction data management.
- Implemented **Apache Kafka** for event-driven transaction processing, enabling asynchronous communication between backend components and supporting real-time transaction and account event workflows.
- Applied **layered architecture, OOP, and microservice-oriented design principles**, and tested REST APIs using **Postman** with integration testing, debugging, database validation, and performance optimization to ensure reliable and consistent backend services.

Yathartha (LIMS) | *Python, FastAPI, React, TypeScript, PostgreSQL*

- Developed scalable RESTful APIs using FastAPI and integrated them with a React frontend to support laboratory workflow automation.
- Designed relational database schemas, optimized SQL queries, and ensured secure and consistent data management using PostgreSQL.
- Collaborated with cross-functional teams to implement backend features, integrate APIs, troubleshoot issues, and resolve production defects.
- Performed API testing, debugging, error handling, and performance optimization to improve application reliability and maintainability.

SmartForecast | *Python, Flask, Streamlit, Scikit-learn, Docker, Kubernetes*

- Developed an ML-based forecasting platform to predict EV charging demand using Random Forest and ARIMA models.
- Performed data preprocessing, feature engineering, exploratory data analysis, and model evaluation to improve prediction accuracy.
- Built interactive dashboards using Flask and Streamlit to provide real-time visualization and analytical insights.
- Containerized and deployed the application using Docker and Kubernetes (Minikube) to support scalable and reliable execution.

Certifications

- **AWS Cloud Practitioner Essentials** – AWS Skill Builder
- **Introduction to Generative AI Studio** – Google Cloud
- **Software Engineer Certification** – HackerRank
- **Python (Basic) Certification** – HackerRank
- **ReactJS** – Infosys Springboard
- **Data Structures with Python** – Great Learning
- **DSA** – GeeksforGeeks, HackerRank
